InFeedo Is Growing. The US Market Won't Wait.

What is InFeedo AI Assist?

An enterprise AI chatbot for HR and IT service delivery - helping employees self-serve queries, take actions, and get answers without raising a ticket or calling HR.

Target customers

Large & midsize enterprises (US-first, India secondary)

Core use cases

HR queries · IT helpdesk · Benefits · Onboarding · Knowledge search

Key differentiator

Built on LLM capabilities — conversational AI + backend orchestration

Business goal

ARR growth + product parity with major US competitors

The Strategic Challenge

InFeedo has strong bones — conversational AI, backend integrations, and an existing user base. But penetrating the US enterprise market requires more than capability.

1

US enterprise buyers compare on feature checklists

Missing modules = disqualified early in procurement.

2

Competitors have a head start

Moveworks and Amelia are entrenched. Parity is the floor to get into the room.

3

New dialogues are no longer USPs

HRMS-to-chatbot is now table stakes. The moat must come from AI-native differentiation.

Where InFeedo Lags - and What It Costs

Module	InFeedo	Amelia	Leena AI	Moveworks	Yellow.ai	Gap Severity
Absence Management	✗	✓	✓	✓	✓	Critical
Employee Directory	✗	✓	✓	✓	✓	Critical
Compensation Management	✗	✓	✓	✗	✓	High
Employee Communication	✗	✗	✓	✗	✗	High
Benefit Management	✓	✓	✓	✓	✗	Parity ✓
Personal Info Mgmt	✓	✓	✗	✓	✗	Parity ✓
Expense Management	✓	✓	✓	✗	✓	Parity ✓
Employee Onboarding	✓	✓	✗	✓	✗	Parity ✓
Knowledge Search	✓	✓	✓	✓	✓	Parity ✓

InFeedo is missing 4 modules competitors offer. 2 are Critical gaps that disqualify it in enterprise shortlists. 2 are high-value differentiators if shipped first.

Four Gaps. Two to Build Now.

Scored on parity urgency, AI differentiation potential, implementation effort, and revenue impact.

Gap	Parity Urgency	AI Differentiation	Effort	Revenue Impact	Decision
Employee Communication & Announcements	High	High	Med	High	Build Now — USP 1
Knowledge Copilot (AI-powered self-service)	Med	Very High	Med	High	Build Now — USP 2
Absence / Leave Management	Critical	Low	Low	Med	Parity Sprint (Post USP 1&2)
Employee Directory	Critical	Low	Low	Med	Parity Sprint (Post USP 1&2)
Rationale: USP 1 and USP 2 chosen because they combine parity value with AI-native differentiation — the combination competitors cannot easily replicate.					

Employee Communication & Announcements

The Problem

HR teams struggle to drive goal completions — open enrolment, training, timesheet compliance. Email campaigns convert at ~10%. Communications get lost. Employees don't act.

Now — MVP

- ✓ **Announcement creation**
HR SPOCs create, configure and reuse announcements
- ✓ **Audience targeting**
Send to specific groups or all employees via Active Directory integration
- ✓ **Scheduling & delivery**
Immediate or scheduled delivery across MS Teams and Slack
- ✓ **Insights dashboard**
Open rates, click-through rates, goal completion tracking per announcement

Next — 2.0 (AI-Native Layer)

- ⚡ **GenAI content copilot**
Drafts, rewrites, tone adjustments, personalisation — in seconds
- ⚡ **Template library**
Org-branded templates. Co-branding and rebranding supported
- ⚡ **Snooze & auto-snooze**
Action-based announcements with automated follow-up sequences
- ⚡ **Multilingual support**
Recipients translate content to preferred language — drives inclusivity

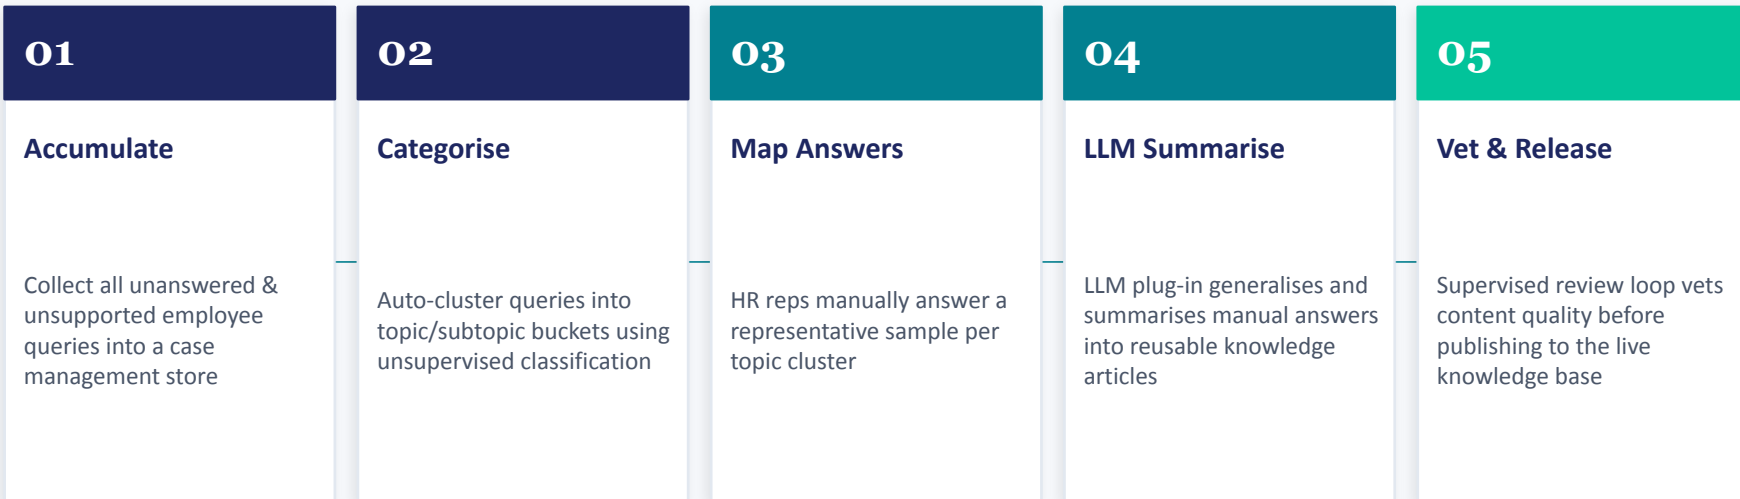

Hypothesis: Moving communication to collaboration channels (Teams/Slack) + GenAI personalisation will push conversion from 10% → 30%+

Knowledge Copilot - Self-Improving AI

The Problem

HR teams spend hours answering repetitive queries. AI auto-answering hits a ceiling - queries grow more complex and the knowledge base can't keep up without manual effort.

The Prototype Pipeline

Hypotheses: Reusing manual answers via LLM reduces HR effort to expand knowledge. Continuous improvement increases containment rate over time.

Key metric: Containment rate ↑

What We'd Measure in the First 90 Days

Both USPs ship in parallel. Progress gates are defined before release not after.

Days 1–30
Foundation

Days 31–60
Activation

Days 61–90
Validation

USP 1 — Employee Communication

- **Announcement delivery rate:** ≥85% of target audience reached
- **Open rate on collaboration channels:** ≥35% (vs 10% email baseline)
- **Goal completion rate uplift:** ≥20% increase vs pre-launch
- **HR content creation time:** ≥30% reduction with GenAI copilot

USP 2 — Knowledge Copilot

- **Unanswered queries categorised:** ≥80% classified within 30 days
- **Knowledge articles auto-generated:** ≥50 new articles from LLM pipeline
- **Containment rate:** ≥5pp improvement vs baseline
- **HR time on manual queries:** ≥25% reduction in query resolution time
